forbicine per gengive | gum scissors

**Forbici tradizionali:**

Le forbici chirurgiche, senza alcuna codifica colore di identificazione, realizzate in acciaio ad alto contenuto di carbonio, vantano un elevato grado di durezza Rockwell delle punte taglienti. Questo fa sì che tutte le operazioni vengano eseguite con il minor trauma possibile per il paziente.

Traditional scissors:

The surgical scissors, with no colour coding identification, made of steel with a high carbon content, have an elevated degree of Rockwell hardness in the cutting tips, thus allowing all the procedures to be carried out with as little trauma as possible for the patient.

forbicine per gengive con inserti al carburo di tungsteno | gum scissors with tungsten carbide inserts

Forbici carburo di tungsteno:

Le forbici in carburo di tungsteno ad utilizzo chirurgico e parodontale, sono identificate da entrambi i manici dorati, codifica internazionale che denota l'apporto di inserti di carburo di tungsteno su entrambe le lame.

Si distinguono per la presa sicura della gengiva, precisione nel taglio e lunga durata nel tempo.

Tungsten-carbide scissors:

Tungsten-carbide scissors for surgical and periodontal use are characterized by the gilding of both handles, which by international coding, indicates the presence of tungsten-carbide inserts on both blades.

Distinguished features of these scissors are the safe gum grip, the precise incision and long lasting performance.

cm. 14,5

forbicine per gengive Super Cut | Super Cut gum scissors

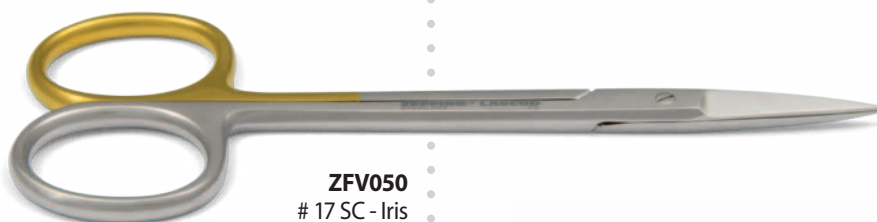

Forbici Super-cut:

Particolarmente innovative, le forbici della serie Super-cut vengono identificate dalla doratura di un solo manico. Il particolare disegno delle punte, con una delle due lame affilata a rasoio, permette di eseguire tagli molto precisi dei tessuti. La lama dentellata per un miglior trattenimento del tessuto, permette l'affilamento della lama tagliente, durante il normale uso della forbice, garantendo un'uniformità di taglio costante nel tempo ed una durata di gran lunga superiore alle normali forbici chirurgiche.

Super-cut scissors:

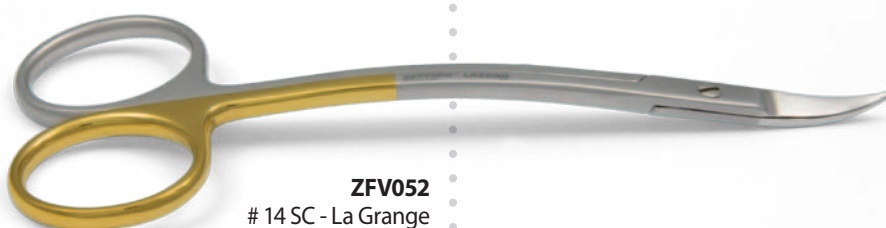

The innovative scissors of the Super-cut series are identified by the gilding on a single handle. The special design of the tips, with one razor-sharp blade, allows for very precise cuts in the tissues. The other blade, notched for a better hold of the tissue, ensures a uniform incision, constant in time and allows for the sharpening of the cutting blade during normal use, thus providing a longer life span compared to standard surgical scissors.

ORAL URGENT TREATMENT

Il kit O.U.T (Oral Urgent Treatment) è il set di pinze da estrazione universali Lascod specifiche per il trattamento orale urgente. Questo è il nostro umile contributo a tutti i professionisti coraggiosi che eseguono estrazioni in situazioni di emergenza.

The out Kit is lascod set of universal forceps specifically designed for oral urgent treatment. This is our humble contribution to all brave professionals who performs extractions in emergency situations.

Se "Where There Is No Dentistry" (di Murray Dickson, 1983) è ampiamente considerato il Manuale di riferimento per specifici progetti di odontoiatria sociale, oggi l'Organizzazione Mondiale della Sanità sostiene attivamente programmi con il nome OUT (Trattamento Urgenza orale) per la creazione di protocolli di emergenza dentale. Lascod sta sviluppando adesso anche strumenti dentali compatibili con tali protocolli in modo che possano essere utilizzati ovunque ci sia la necessità di un trattamento odontoiatrico d'urgenza (incidenti stradali o di lavoro), nonché in aree remote ed in odontoiatria di campo. Il kit O.U.T può essere molto utile anche nei casi di assistenza odontoiatrica domiciliare, alle persone disabili o non trasportabili.

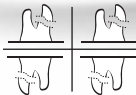

If "Where There Is No Dentistry" (by Murray Dickson, 1983) is widely considered the Reference Manual for specific social dentistry projects, nowadays the World Health Organization is actively supporting programs named OUT (Oral Urgency Treatment) for the creation of dental emergency protocols. Lascod is now developing also dental instruments compatible with such protocols and to be used wherever there is the necessity of an urgent treatment (traffic or work accidents) as well as remote areas and field dentistry. The O.U.T Kit can be very useful also in cases of home care in dentistry necessary to disabled or not transportable people.

La particolare forma ergonomica rende queste pinze estremamente maneggevoli. L'inclinazione e le punte sono state studiate per ottimizzare la presa di ogni elemento dentario nelle due arcate.

The special ergonomic design makes these pliers extremely handy. The inclination and the tips are designed to maximize the grip of any tooth in the two dental arches.

Il Kit O.U.T è perfettamente trasportabile grazie al fatto di utilizzare tre sole pinze adattabili ad ogni tipo di estrazione.

LASCOD O.U.T. basic kit responds efficiently to the need of portability with just three forceps for any extraction.

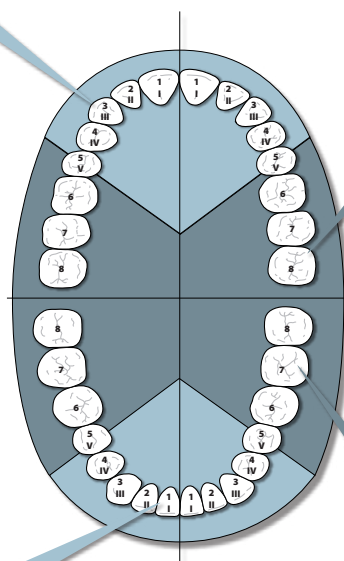

pinze per estrazione | extracting forceps

UNIVERSALI

Con solo tre pinze è possibile fare estrazioni di ogni singolo elemento dentario sia nell'arcata superiore che inferiore, sia sinistra che destra.

UNIVERSAL

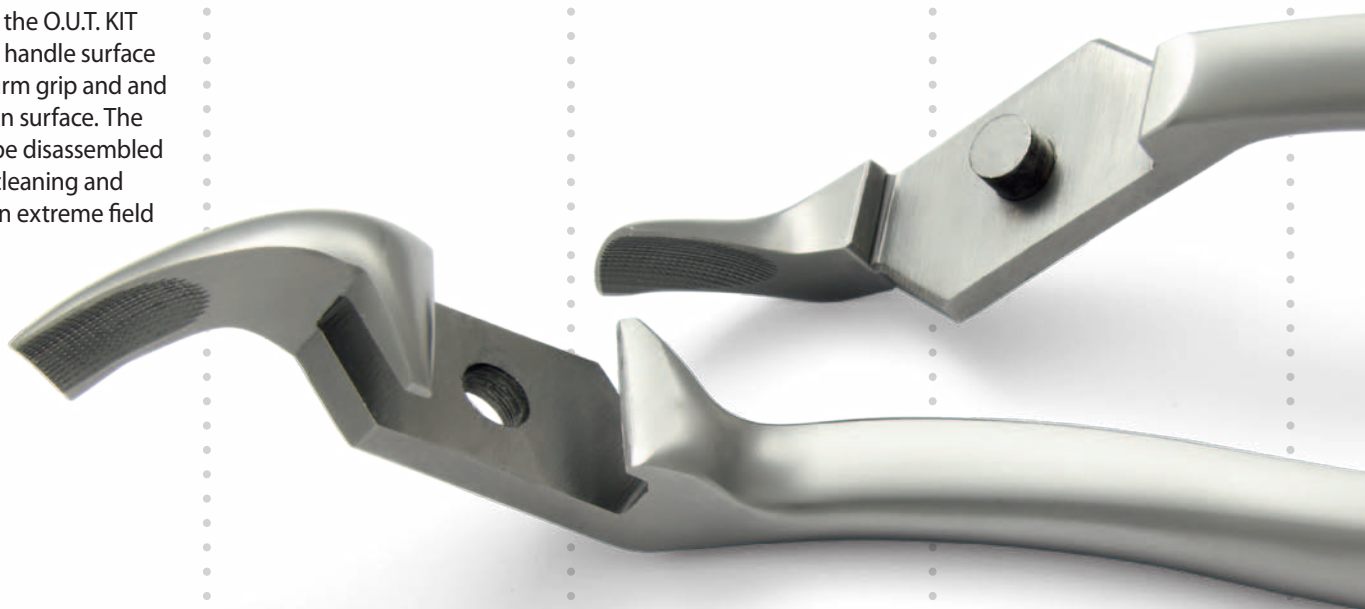

With only three forceps you can extract any tooth in the upper or lower arch, and in the upper and lower front, on the left or right side.

**IGIENE ASSOLUTA**

Il motto Lascod è Igiene Assoluta ed il Kit O.U.T con il manico delle pinze sabbiato (e non zigrinato) oltre a garantire un'ottima tenuta permette una ancor più facile pulizia dello strumento. Inoltre la pinza può essere smontata in modo da essere pulita e sterilizzata più facilmente in qualsiasi situazione.

ABSOLUTE HYGIENE

LASCOD MOTTO is Absolute Hygiene and the O.U.T. KIT sand blasted handle surface guarantees firm grip and easy to clean surface. The forceps can be disassembled to optimize cleaning and sterilization in extreme field situations.
